#### Headlines

A sudden slump in carbon and oil prices has pulled down power prices this week. Annual power fell 2.1% to a three-week low of £52.2/MWh and annual gas dropped 1% to 68.1/th. The annual baseload power price is now 3% lower than the March 2013 average and 1% lower than the 2012 average of £52.9/MWh. Day-ahead prices were also down this week, gas fell 1.5% to 67.0p/th while power dropped 9.6% to £53.5/MWh as wind power output topped 5GW during the week. Gas generation was less profitable this week as a result of lower power prices, the annual clean spark spread fell 10% to £2.8/MWh. The annual clean dark spread slipped as a result of lower power prices, the spread dropped 0.5% to £24.2/MWh. The clean dark spread is now at a £21.6/MWh premium to the clean spark spread. Carbon prices tumbled to a record low of €2.7/t as the EU parliament voted against back-loading proposals intended to support the value of carbon. Brent crude oil dropped below \$100/bl for the first time since July 2012 as poor economic data from China and the US stoked concerns about low global oil demand growth. The month-ahead Brent crude oil contract fell 5.1% to a weekly average of \$99.8/bl.

## **Baseload electricity**

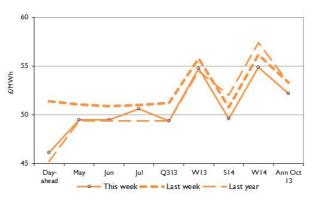

- Annual baseload power prices were helped down by lower carbon and gas prices.
- Annual October 13 baseload power fell 2.1% to a seven-month low of £52.2/MWh.

#### **Annual October contract**

- Day-ahead power dropped 10.3% to a three-month low of £46.1/MWh.
- High wind generation levels helped to keep dayahead power prices low this week.

#### Forward curve comparison

#### **Peak electricity**

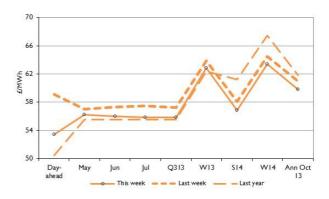

- Peak power prices followed the trend in the gas market.
- The annual October 2013 peak power contract fell 1.9% to £59.8/MWh.

#### **Annual October contract**

- Day-ahead peak electricity dropped 9.6% to £53.5/MWh.
- The contract is now 46.6% lower than last month but 6% higher than last year.

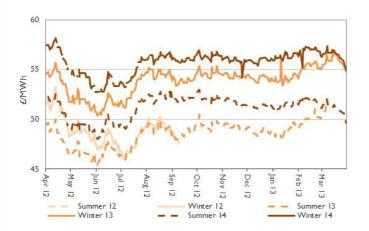

#### Forward curve comparison

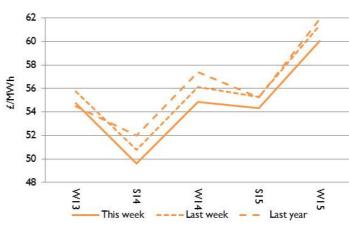

## Seasonal power prices

#### Seasonal power contracts

- Winter power contracts were down 2.1% on average. Winter 13 electricity fell 1.8% to £54.8/MWh.
- On average summer power contracts were down
   2%. Summer 14 slipped 2.4% to £49.6/MWh.

## Seasonal power curve

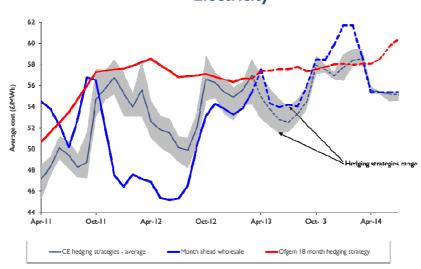

- The winter 13 power contract is now 1.4% lower than last month's level of £55.5/MWh.
- Winter 13 power is now 0.5% above the price in 2012, which was £54.5/MWh.

## Supplier hedging strategies

Cold weather and supply have pushed up UK electricity and gas contracts during March. Average month-ahead wholesale gas prices for the last four weeks have increased by 7% compared with the previous month's figures, while month-ahead electricity prices climbed 5.6%. There has been an increase in suppliers' cost-based notional hedging strategies, prices are likely to reduce again during the summer, but the fall will be not match the large drop seen in summer 2012. It is therefore unlikely there will be a price reduction before next winter. Electricity prices for this winter are expected to be 2% higher than last year. The Department of Energy and Climate Change released its estimates of the impact of policies on consumer bills. DECC said its policies have reduced gas and power bills by 5% and by 2020 bills will have been reduced by 11%.

Although both Ofgem's and our assessments show a similar overall trend, the incorporation of nearer-term prices makes our assessments more volatile than Ofgem's smoothed quarterly and seasonally based approach.

| This table shows the price this week compared with prices from the previous week, month and year. The graphs show the position of this week's prices with a red X and the range of prices over the year is represented by the black line. | 68 - X<br>66 - 64 - 62 - 60 - 60 - 60 - 60 - 60 - 60 - 60 | 88          | 54 T       | 116.0 T<br>112.0 T<br>108.0 T<br>104.0 T<br>100.0 T<br>96.0 T<br>92.0 T<br>88.0 T<br>84.0 T<br>80.0 T | 117 -<br>115 -<br>113 -<br>111 -<br>109 - | 115 T<br>110 T<br>105 T<br>100 T<br>95 T<br>90 T | 10    | 120 T<br>116 -<br>112 -<br>108 -<br>104 -<br>100 -<br>96 -<br>92 -<br>88 - |        |             |

## **About EDW Technology Limited**

EDW has an extensive history of developing, implementing and supporting its 'best of breed' retail electricity software solutions.

In 2000, EDW began building a revolutionary new electricity software platform to support the rigorous demands of the UK's deregulated electricity supply market – a market characterised by rapidly changing government regulation, business processes, market rules, industry dataflows and customer demands. EDW were founded as a provider of high quality, end-to-end IT services and we have remained true to that aim ever since, servicing a range of companies in the energy industry.

For over 11 years, our software product ERS has empowered business electricity suppliers to transform customer experience, improve business efficiency, reduce costs to serve and improve profitability.

EDW has a UK based team of 60 employees working from the EDW offices in Milton Keynes.

## Industrial and commercial billing specialists

The industrial and commercial electricity supply market has unique business requirements that need to be serviced with a specialised set of IT system capabilities. Sophisticated business customers are willing to actively engage in the management of their energy accounts and solutions need to provide tools that support enhanced service interaction. EDW has gathered an extensive knowledge of the industrial and commercial market sector that enables the delivery of a powerful set of system capabilities essential to your requirements to service this complex and demanding market sector.
